

Beat the Traps — School licence

Version dated 19 September 2026. The licence and Annex A are the terms on which Beat the Traps is supplied to a school; the invoice names the school, the seat band and the price.

1. Parties

This agreement is between Leonie Sakatis, trading as SakatisMaths, of Lytchett House, 13 Freeland Park, Wareham Road, Poole, Dorset BH16 6FA ("we", "us") and the school named on the invoice ("the School"). It is a business-to-business agreement. The Consumer Contracts Regulations 2013 and the consumer provisions of the Consumer Rights Act 2015 do not apply to it.

2. What the School gets

Access to Beat the Traps for up to the number of student seats shown on the invoice, plus **unlimited teacher accounts** at no extra charge. Beat the Traps is an online revision course for Edexcel A level Mathematics: 39 modules, theory cards, warm-ups, traps with worked solutions, and exam-style questions with mark schemes, used in a web browser at app.sakatismaths.co.uk. Teachers also get a class dashboard showing each student's progress, and can set modules as homework.

Seat bands and prices, per year, no VAT:

Seats	Price
up to 20	£220
up to 30	£230
up to 50	£250
up to 75	£275
up to 100	£300

Larger numbers, or a multi-school trust, by quotation.

3. Licence period

The licence runs for **one year** from its start date, which is the date the order is confirmed and is shown on the invoice. It does not renew automatically. We will remind the School's named contact about a month before it ends.

4. Seats

Each student seat is for one named individual and is not shared. The School's teachers create students, and archive a student who leaves, in the product; archiving frees the

seat for another student. A seat may not be used so as to give two students access at once.

There is no charge for a small overrun. If the School's numbers move up a band mid-year we will invoice the difference, not the full higher band. We never lock out a student who is already using the product because the School is over its band.

5. What teachers may do

Teachers may **display any part of Beat the Traps to a class**, on a screen or a whiteboard, in a lesson or an intervention session. They may work through a trap with a class. They may refer to it in schemes of work and set it as independent study.

Teachers may **not** copy the questions, diagrams or wording into their own worksheets, booklets, presentations or exam papers; upload any part of it to the school VLE, a shared drive, or any other place a person without a seat could reach it; or pass it to a colleague at another school. The material stays ours. Each page served carries the account it was served to.

6. What the School agrees to

- To enter only the names of students it is entitled to enrol, and to have told those students and, where appropriate, their parents that the School has arranged the product and that their teachers can see their progress in it, including which answers they chose.
- To tell students not to share their sign-in.
- To tell us promptly if a sign-in is being shared or the material is being copied.
- To name one member of staff as the contact for this agreement and for anything about personal information.
- To give teacher accounts only to its own staff, and to archive a teacher's account when they leave.

We may count the number of active student accounts from the School in order to check seat use. We do this by counting, not by looking at individuals.

7. Data protection roles

For the pupil records held in Beat the Traps — a pupil's first name and surname, the username the school generates, their teaching group and the date they joined it, the homework set for that group, and their progress through the modules — the School is the controller and SakatisMaths is the processor.

The School decides that the product will be used, which pupils are given accounts, what names are entered, which staff may see the records, and when they are removed. SakatisMaths holds those records only to provide the service, on the School's instructions, and for no purpose of its own. Pupil information is not used for product

development, analytics, research, published statistics, or training of any kind, and is not shared with anyone.

Sakatismaths is the controller of its own records: the name and email address of each member of staff given an account, the School's account and billing records, and the security logs kept to protect the service.

Annex A sets out the processing terms required by Article 28 UK GDPR — sub-processors, security, assistance with rights requests and assessments, and breach notification. The School may download a class spreadsheet at any time while the licence runs, and that is how it keeps a copy. The records themselves are deleted twelve months after access ends, or sooner if the School asks; they are never kept longer.

Our privacy notice is at sakatismaths.co.uk/privacy and we are registered with the Information Commissioner's Office under number C2024586.

8. Payment

We invoice on order. Payment within **30 days**. We can quote against a purchase order and put the order number on the invoice. Access is set up when the order is confirmed, not when payment clears — we are not going to hold up a class over a finance office. No VAT is charged; we are not VAT-registered.

9. What we promise, and what we do not

Every trap is built from real question papers, mark schemes and examiner reports. We will use reasonable skill and care and will correct errors in the material when they are pointed out.

We do not promise any grade, or that any topic will appear in any examination, or that the service will be uninterrupted. Beat the Traps is written independently and is not endorsed by, connected with or approved by Pearson Education Ltd.

10. Liability

Neither of us limits liability for death or personal injury caused by negligence, for fraud, or for anything the law does not allow to be limited. Otherwise **our total liability under this agreement, including under Annex A, is limited to the fees the School has paid us for the current licence period**, and we are not liable for loss of profit, loss of anticipated savings, or examination results.

11. Ending it early

Either of us may end this agreement if the other breaks it seriously and does not put it right within 30 days of being asked in writing. If we end it because the material has been copied or seats shared, no refund is due. If the School ends it because we have

failed to provide the service, we refund the unused part. Annex A8 applies to the records whichever way it ends.

12. Complaints

hello@sakatismaths.co.uk. Anything about personal information goes to privacy@sakatismaths.co.uk.

13. General

The School accepts this agreement by confirming its order: on the order form at app.sakatismaths.co.uk/order, by email, or by sending a purchase order. Using the service is also acceptance. This agreement, Annex A and the invoice are the whole agreement between us. Neither of us may transfer it without the other's written agreement, except that we may transfer it if the business is sold. Governed by the law of England and Wales, courts of England and Wales.

Annex A — Data processing terms

A1. What this covers

- **Subject matter:** holding pupil accounts and progress records so pupils can revise and their teachers can see how they are getting on.
- **Duration:** the licence term, plus twelve months after access ends for the records (A8).
- **Nature and purpose:** storing and displaying the records; nothing else.
- **Personal data:** first name, surname, generated username, teaching group and the date they joined it, password hash, dates created / archived / last signed in; homework set for their teaching group, with its start and due dates; per module: warm-up counts, traps beaten and tried and the date each trap was first beaten, exam done, the option chosen on each practice part, first answers, retry counts and scores.
- **Data subjects:** pupils the School enrolls, typically aged 16–18.
- **Not held:** email addresses, dates of birth, anything the teacher did not type into the class list.

A2. Instructions

Sakatismaths processes pupil records only on the School's documented instructions. This licence, the settings the School's staff choose in the product, and written requests from the School's named contact are the instructions. If an instruction would break the law, Sakatismaths says so before acting on it.

A3. Confidentiality

Everyone at SakatisMaths with access to the records is bound by a duty of confidentiality.

A4. Security

The measures in force:

- Passwords hashed with PBKDF2 (600,000 iterations effective); never stored in clear.
- Session cookies `__Host-` prefixed, HttpOnly, Secure, SameSite; sessions stored hashed; revoked on password change.
- Every page served with a Content Security Policy of default-src 'self' and no third-party scripts, fonts, or images. HSTS on.
- Every database statement parameterised. Tenancy enforced from the signed-in session, never from anything the browser sends.
- Rate limits on sign-in per username and per address.
- No personal data written to logs.
- Hosted on Cloudflare Workers and D1, jurisdiction fixed to the EU.

We may strengthen these measures at any time and will not weaken them without telling the School.

A5. Sub-processors

Cloudflare, Inc. — hosting, database, and delivery. UK/EU processing. No others.

SakatisMaths will tell the School in writing before adding or replacing a sub-processor and the School may object within **30 days**.

A6. Helping the School

- **Rights requests.** If a pupil or parent asks the School for a copy of the records, or for them to be erased, SakatisMaths gives the School what it needs within **10 working days**. Teachers can archive pupils, reset their passwords, and correct their names and groups themselves, without asking.
- **Assessments.** SakatisMaths provides the information a School needs for a DPIA on request; a one-page DPIA information sheet is available on request.

A7. Breaches

SakatisMaths tells the School's named contact without undue delay, and in any case **within 48 hours** of becoming aware of a personal data breach affecting the School's records, with what is known at that point, and follows up as more is known. The School decides whether to notify the ICO and the pupils.

A8. Keeping and deleting the records

- Records are kept for twelve months after the pupil's access ends, so a lapsed licence that renews in September, or a Year 12 returning in Year 13, starts where it left off.
- The School may ask for a shorter period at any time; SakatisMaths never keeps records longer than twelve months after access ends.
- The School keeps its own copy by downloading the class spreadsheet from the Review screen at any time while the licence runs. That download is the School's copy, held on the School's device and under the School's control. It contains: name, modules finished and opened, traps beaten and opened, warm-up right and answered, Exam Ready done, last used, and traps beaten per module. It does not contain usernames, groups, or the option chosen on each practice part.
- Deletion is real: an archived School's records are erased from the database on the School's request or at the end of the retention period. The sub-processor's point-in-time backup retains a copy for a further **30 days** and then it is gone.

A9. Showing compliance

SakatisMaths answers the School's reasonable written questions about these terms and provides written evidence of the measures in A4, and a remote demonstration on request. Any further audit is at the School's cost, on 30 days' notice, no more than once a year, and in a way that does not expose other schools' records.

A10. Liability

Liability under this Annex is covered by §10 of the licence.
